8,300,000 rubles worth of construction and installation work above the 1949  
plan.

Winch Skidding Begun in Dvinoles Trust

M. Ya. Zav'yalov, chief engineer of Dvinoles Trust, reports that the continuous method of logging was inaugurated in the trust in May 1949 by a brigade at the Levkovskiy Logging Point of Rovdino Timber Management. The brigade used a TL-3 electric winch for skidding.

The brigade worked in a grove of pine, spruce, and birch trees with resources of 120 cubic meters per hectare. The average log had a content of 0.2 cubic meters.

The brigade consisted of 16 workers divided into three sections: the five-man felling section consisted of the electric saw operator, his assistant, and three branch trimmers. The three-man skidding section was composed of the winch operator, the log hooker-on, and the log hooker-off. The eight-man yarding section consisted of the bucker, using an electric saw, who is in charge of the entire brigade, his assistant who was also the length marker, and six sorters and loaders.

Output for the entire brigade, including all processes from felling to loading onto the logging railroad cars, was as high as 3 cubic meters per man-day.

At present, a total of 12 electric skidding winches and six PES-60 portable electric power plants are being placed into operation at the logging enterprises of the Dvinoles Trust.
